### ScALeD Agile Lean Development - The Principles

Agile methods are becoming ever more popular, and a growing number of companies has adopted agile practices on a large scale. But successfully scaling agility is challenging. As companies, projects and teams differ, there is no silver bullet solution to...

*Understand the Constraints  
of your System*

**What GenAI has and still is constraining:**

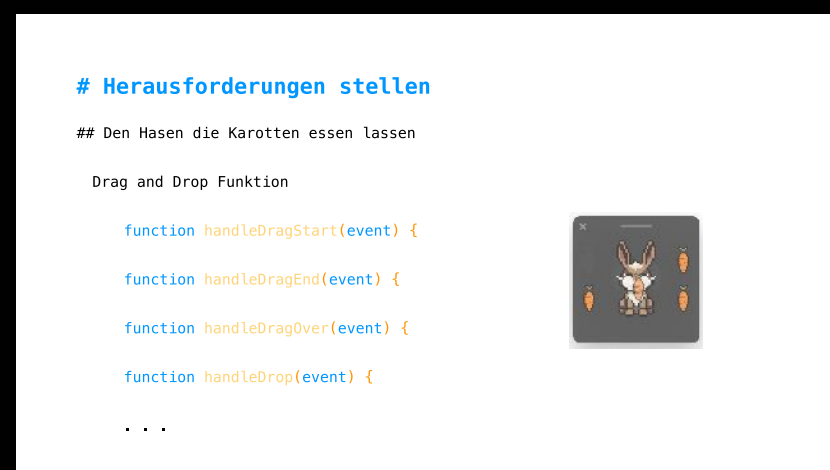

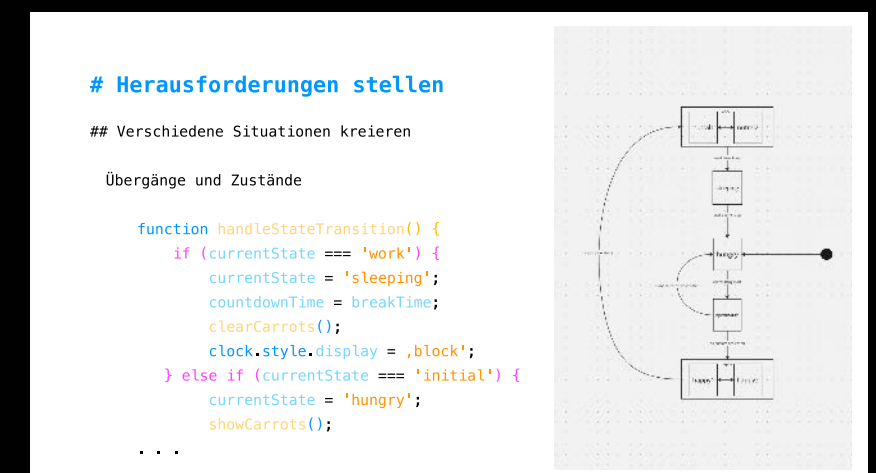

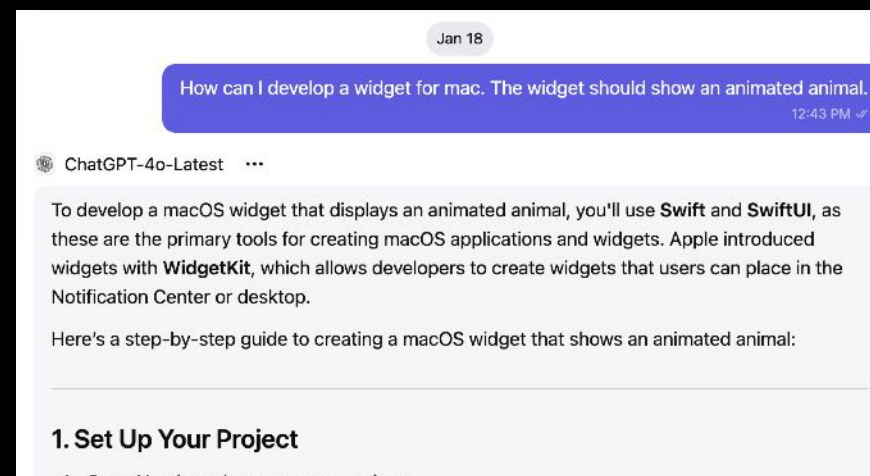

- 1. Energy > Computing Power**
- 2. Data > Regulation, Closed Data, Amount and Structure of Data**
- 3. Methods > Algorithms, Knowledge**

# The Hype about the Vibe

- Desktop APP
- No Coding Experience
- 2 Weeks

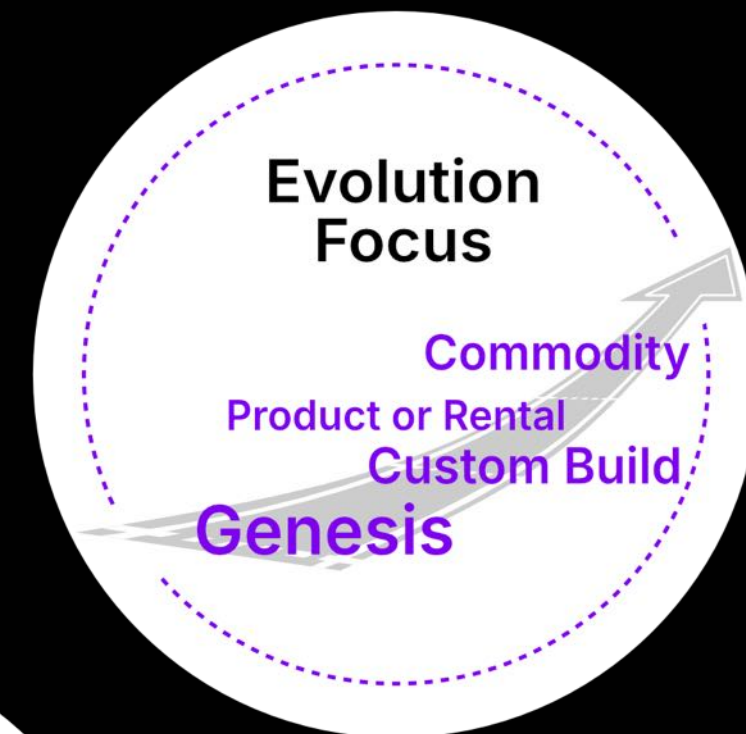

Do we need development teams anymore if we have AI Agents?

# Strategic Doctrine

A **Strategic Doctrine** provides a framework for tactics, setting out the fundamental beliefs, priorities, and methods that shape policies, operations, and the use of power over time.

Wardley's Doctrine (universally useful patterns that a user can apply regardless of context)					
	Communication	Development	Operation	Learning	Leading
IV				Listen to your ecosystem	Exploit the landscape
III			Optimise flow	Do better with less	There is no cure
II		Focus on the outcome	Manage inertia	Set exceptional standards	Commit to the direction
I		Think fast, inexpensive, restrained and elegant	Manage failure	Be pragmatic	Be the owner
Phase 1	A bias towards open	Know your users	Effectiveness over efficiency	Use standards	Inspire others
	Common Language	Focus on user needs	Know the details	Challenge Assumptions	Embrace uncertainty
	Understand what is being considered	Remove bias and duplication	Use appropriate methods	Know the details	Be humble

## Doctrine assessment

Wardley's Doctrine assessment tool

# Strategic Doctrine #1

**Correlation is  
Not causation**

**Empirical:** Based on  
what is experienced or  
seen rather than on  
theory

**GenAI Projects:  
70-95% failure rate**

Source: MIT Research Initiative Study (2023)  
The research consistently shows that GenAI projects have extremely high failure rates, with studies ranging from 70-95% failure rates across different implementations and organizations.  
The Research Studies and Their Findings:  
1. MIT PANAMA Initiative Study (2023)  
- Success Rate: Only 1% of AI pilot programs achieve rapid revenue acceleration; the vast majority stall, delivering little to no measurable impact on P&L.  
- Research Scope: 125 interviews with leaders, a survey of 300 public AI deployments.  
- Key Finding: Purchasing AI tools from specialized vendors and building partnerships succeed about 57% of the time, while internal builds succeed only one-third as often.  
- Source: <https://www.mit.edu/research/initiative/panama/>  
2. RAND Corporation Study (2023)  
- Success Rate: In some industries, more than 90 percent of AI projects fail. That's twice the rate of failure of information technology projects that do not involve AI.  
- Research Method: Government GAO interviews and engineers with at least five years of experience in building AI/ML models in industry or academia.  
- Finding: Identified five leading root causes for AI project failure.  
- Source: <https://www.rand.org/pubs/other/2023/04/ai-project-failure.html>  
3. Boston Consulting Group (BCG) Study (2023)  
- Success Rate: Only 25% of companies have developed the necessary set of capabilities to move beyond proofs of concept and generate tangible value.  
- Research Scope: Comprehensive survey of 1,000 C-suite and senior executives from over 20 sectors, spanning 38 countries in Asia, Europe, and North America.  
- Key Finding: Companies have developed cutting-edge AI capabilities across functions and consistently generate significant value.  
- Source: <https://www.bcg.com/publications/2023/ai-capabilities>  
4. Gartner Prediction (2024)  
- Success Rate: At least 25% of generative AI projects will be abandoned after proof of concept by the end of 2023, due to poor data quality, inadequate risk controls, escalating costs or unclear business value.  
- Risk Factor: Poor data quality, inadequate risk controls, escalating costs, unclear business value.  
- Source: <https://www.gartner.com/en/newsroom/press-releases/2023-10-24-generative-ai-will-be-abandoned-after-proof-of-concept-by-the-end-of-2023>  
5. McKinsey & Company Study (2024)  
- Success Rate: Almost all organizations report measurable ROI with GenAI in their most advanced initiatives, and 20% report ROI in areas of 10%. The vast majority (70%) say their most advanced initiative is meeting or exceeding 10X expectations.  
- Scaling Challenge: Only 52% have managed to move more than 20% of their experiments into full production.  
- Research Scope: Multiple surveys spanning throughout 2023.

# First: Assess the landscape

# Assess the Landscape

Through competition, everything is subject to evolution

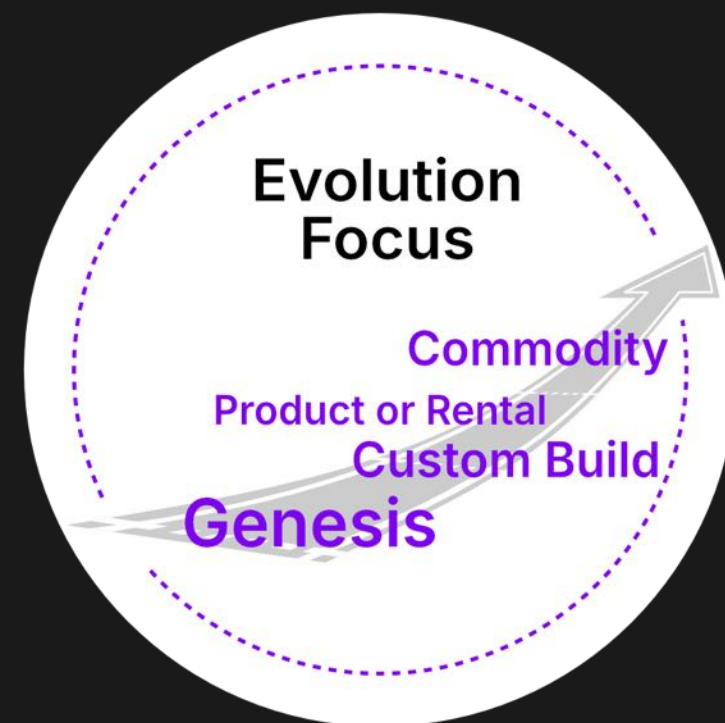

GenAI practices and technologies following the same flow of evolution

GenAI accelerates this flow of evolution for most businesses

# Strategic Doctrine #2

**Evolution Focus *First!***

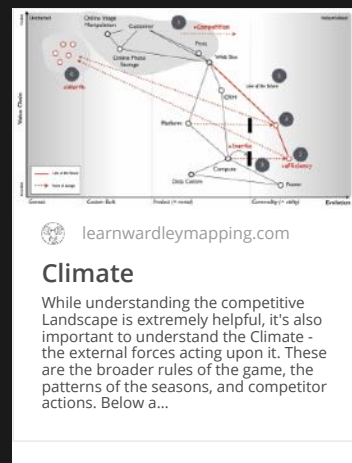

***Second:***

**Agile**

**Ability to Respond**

**Efficiency**

**Flow & Stability**

# Value Chain / Higher-Order System

Visible  
Invisible

**Missing:**

- Key practices, tools, models, and players
- Your customer, product, and services
- Entire industries like medicine, agriculture, and robotics

Users are beginning to understand what they want.

Big tech companies are creating a lot of pressure to turn services into commodities

During a gold rush, the shovel sellers profit most

Consumer needs: Writing, knowledge, translation, ...

Knowledge and reasoning Apps  
(Chat GPT, Poe ...)

OS Integration (Apple AI, ...)

My LLM-based, self-coded  
writing assistance. Poor me \$:/

AI improved CRM, Sales & Marketing

AI improved ERP

Programming assistants (Copilot, ...)

Agent Frameworks  
(LangChain, Claude Flow ..)

Knowledge & reasoning as a service (API for OpenAI o1, ...)

Markets & platforms for data, models, tools (Hugging Face, GitHub ...)

GenAI models

Domain-specific Models

Closed Models

OWM

MPC Services

---New market is evolving?---

Data

Private Data

Closed Datasets

Public Datasets

Cloud computing

Specialized GPU (Nvidia, ...)

Energy

- OWM: Open Weight Models (OWM) like Llama, DeepSeek, ...)
- RAG: retrieval augmented generation
- PK: Process Knowledge to provide the products and services of an enterprise
- GenAI: Generative AI Models. E.g. LLM, Diffusion Models
- MCP: [Model Context Protocol](#)

# The Hype about the Vibe

GenAI accelerates the evolution of services & products. But the patterns of social systems will remain.

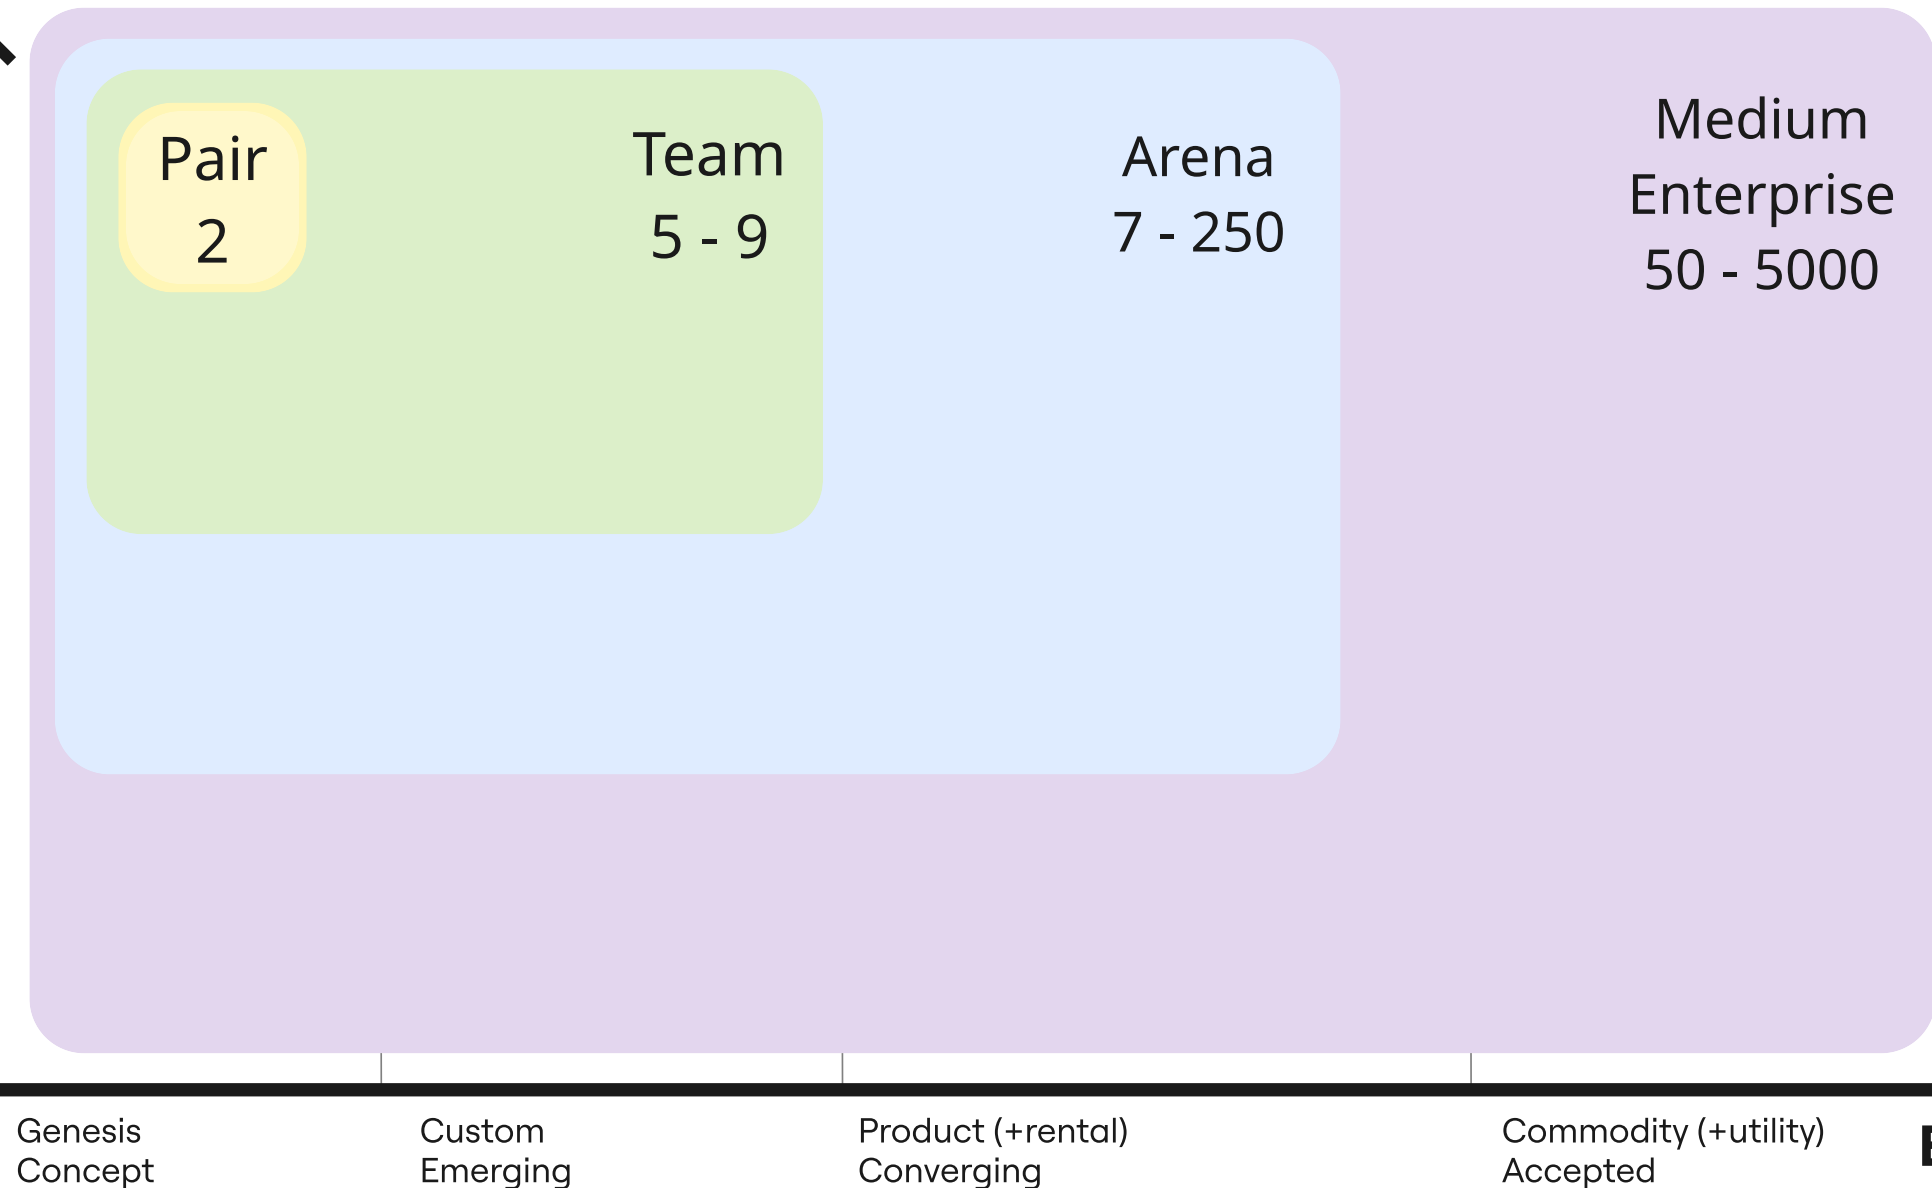

As soon as we invent a practice or tool that simplifies work, like GenAI, we immediately use it to stay at the maximum level of complexity we can manage.

- What domain skills do we still need?
- What do our employees need to learn?
- How to organize and structure

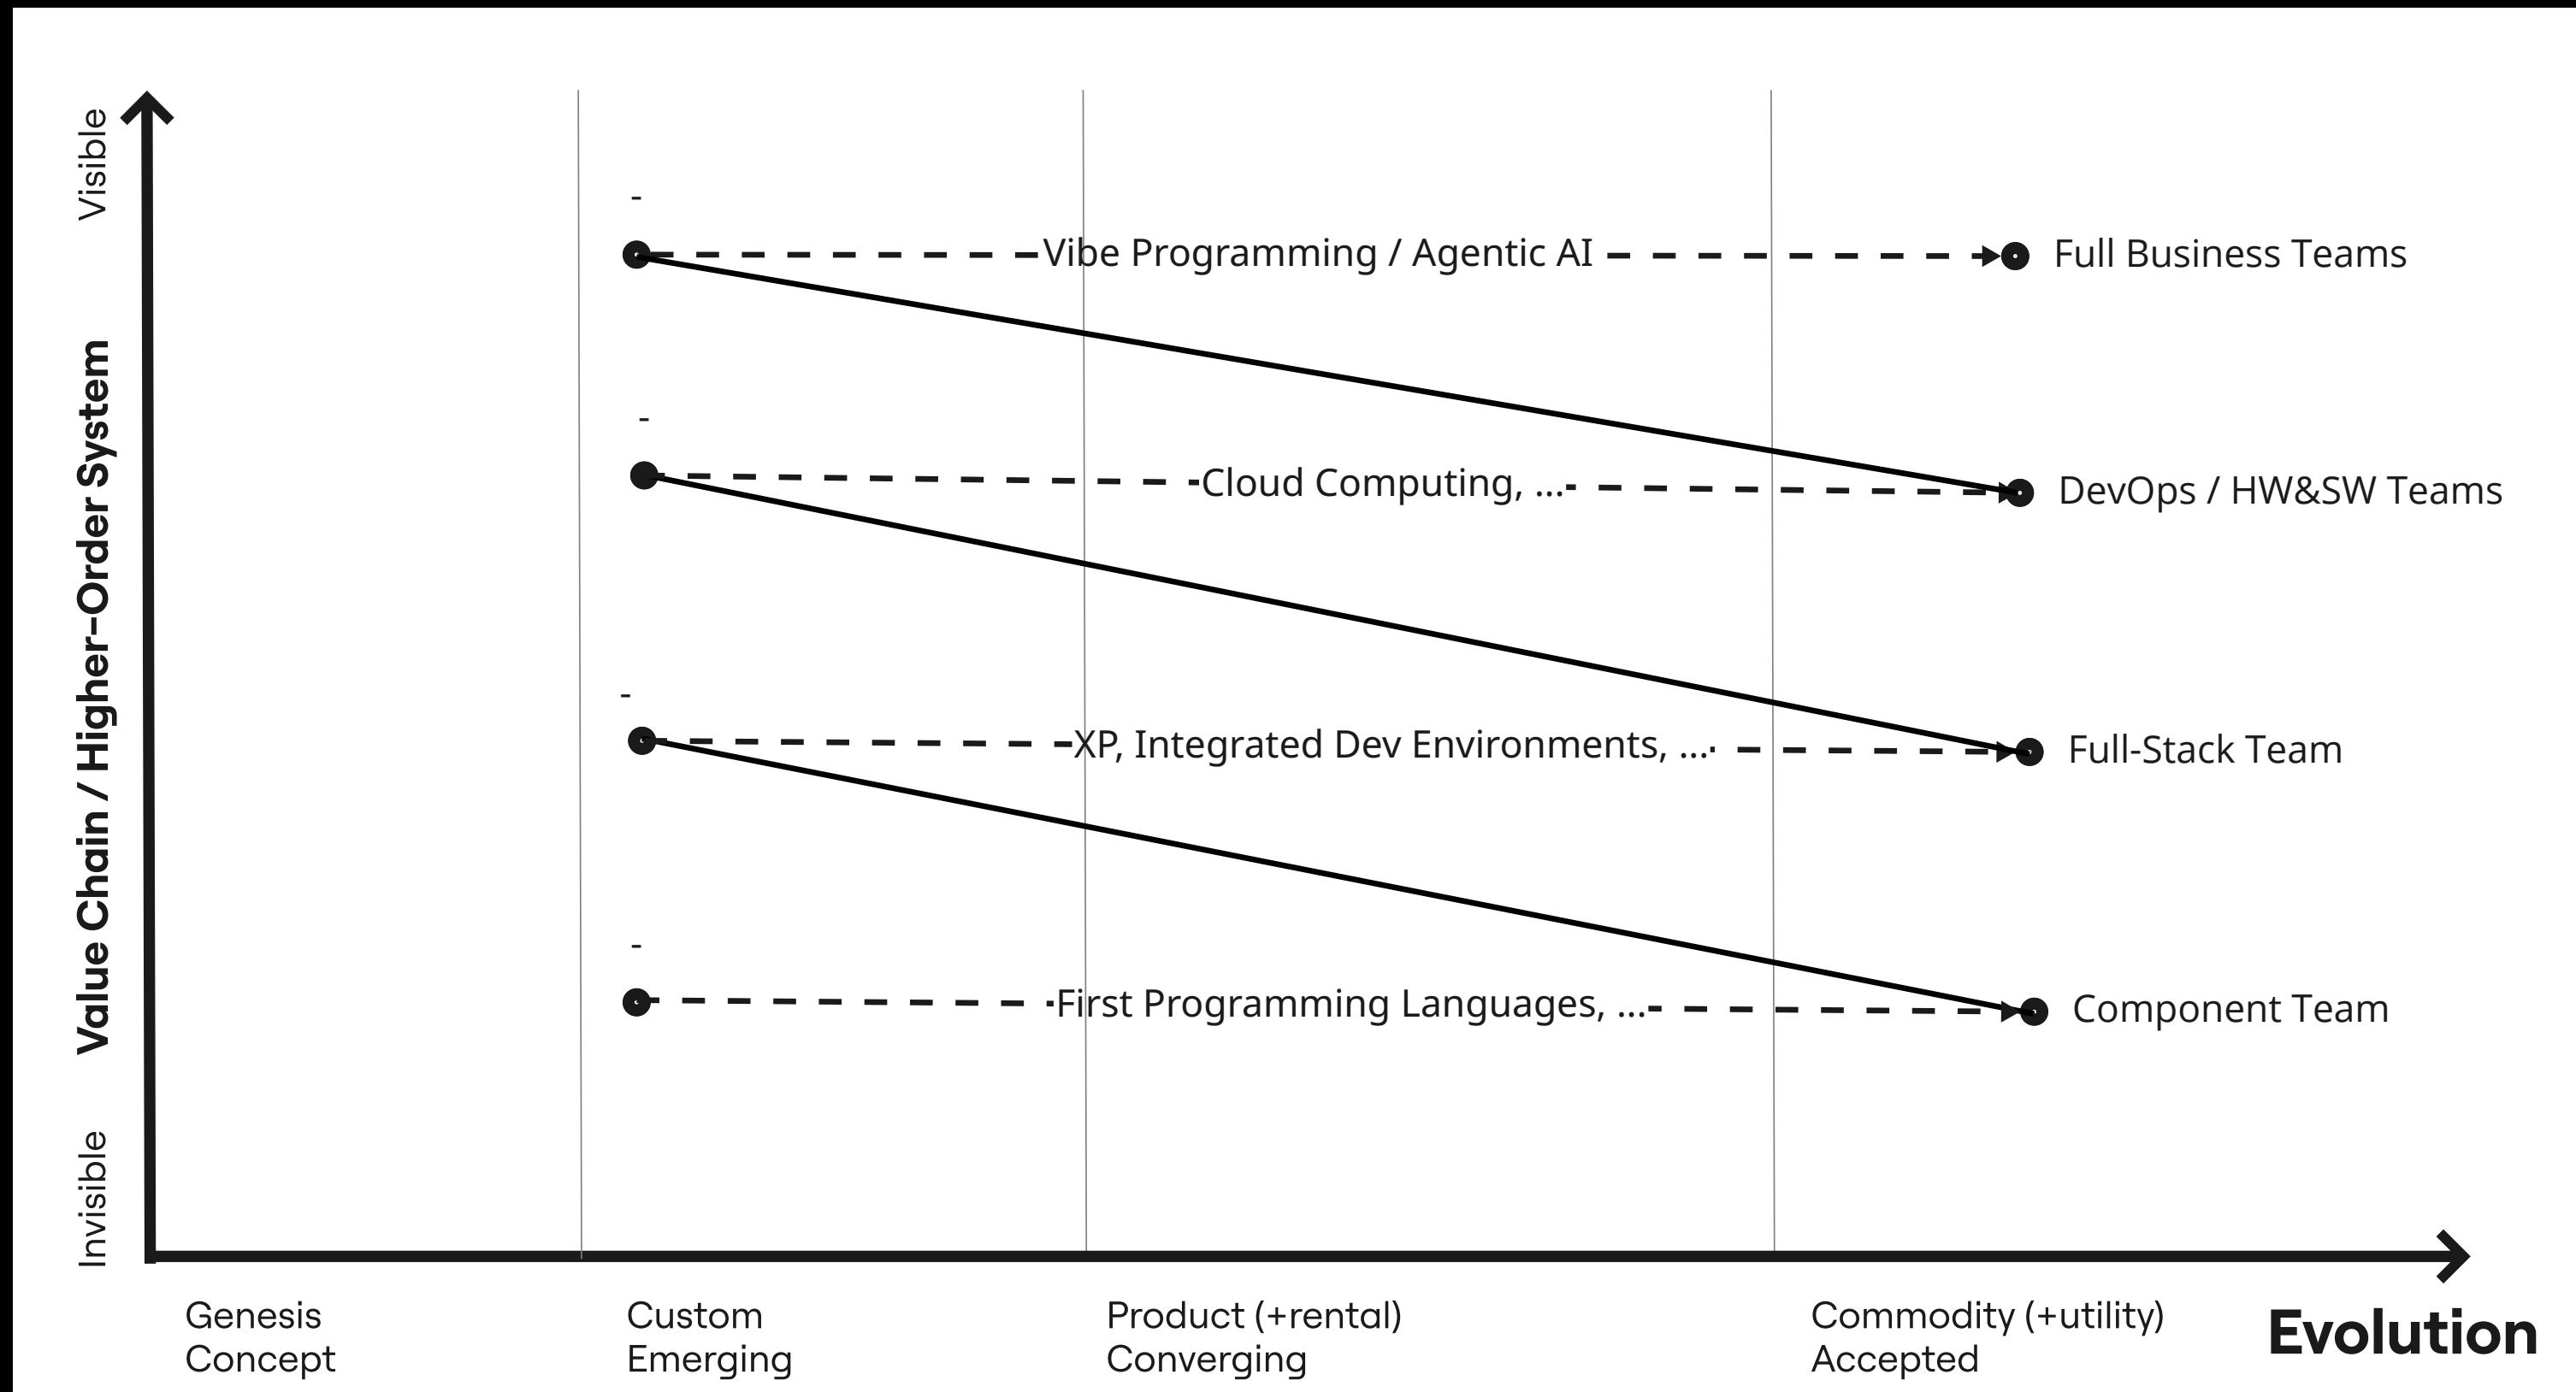

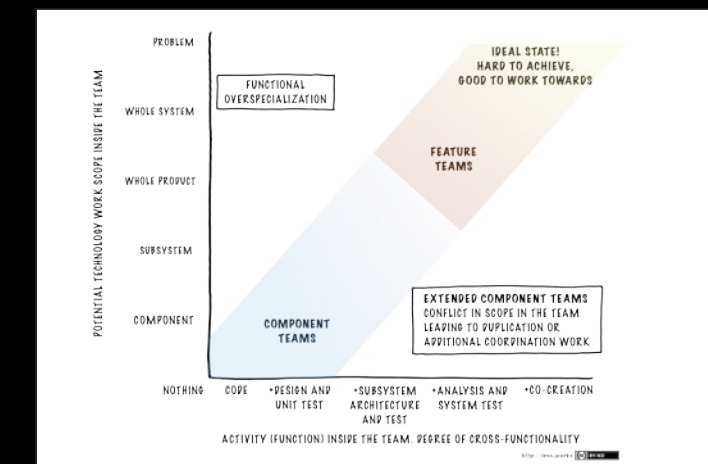

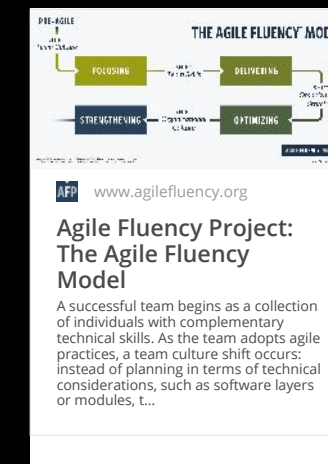

Visible  
Value Chain / Higher-Order System  
Invisible

Evolution

AME 3

# The AI Enhanced Team

*"No matter how it looks at first, it's  
always a people problem."*

Gerald Weinberg

# AME3

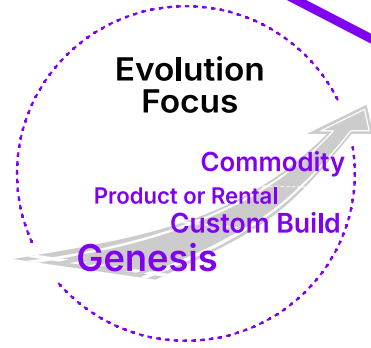

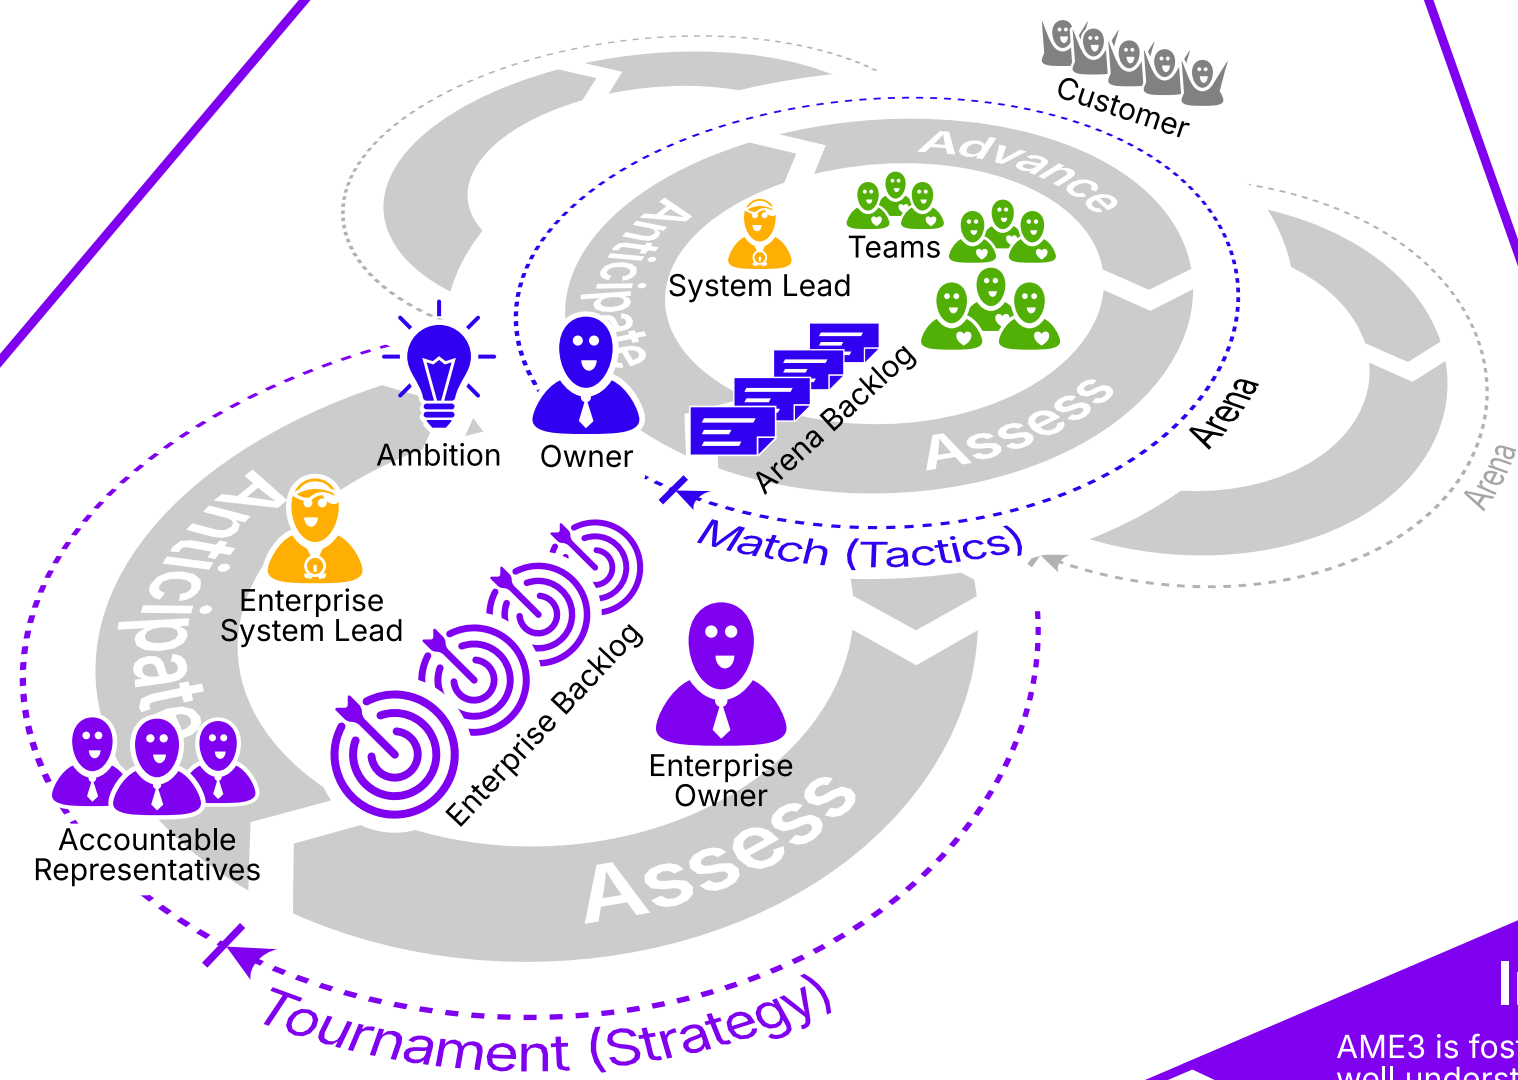

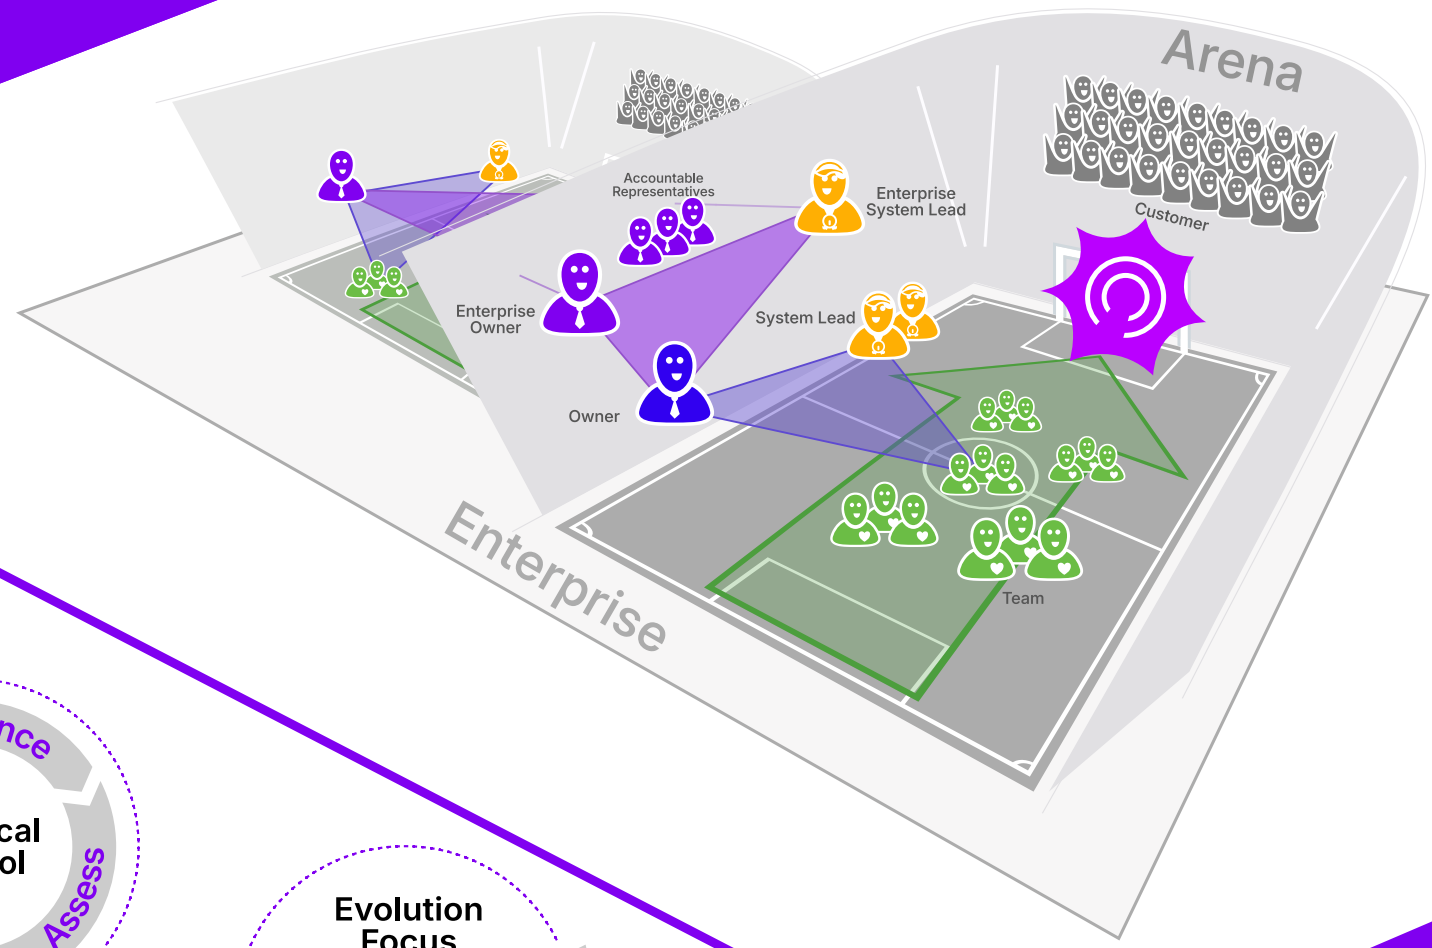

AME3 is a framework to lead the evolution of products, services, and organization of tomorrow's enterprises.

**System**  
AME3 offers a straightforward and streamlined operational system. It is easy to adopt and has proven itself over decades.

**Leadership**

**Rules**

**Strategy**

**Playbook**  
AME3 does not require costly transformation projects. Instead, it establishes continuous innovation on the enterprise level. Start by following the playbook.

**Interplay**  
AME3 is fostering the use of well understood Agile & Lean methods like Scrum and Kanban. AME3 gives guidance on when and how to use them.

- Scrum
- LeSS
- Cynefin
- Design Thinking
- Product Discovery
- Scrum@Scale
- Wardley Mapping
- eXtreme Programming
- Kanban

We can't say how our business will change because of GenAI, but we can develop a strategy now.

**Empirical control** at the enterprise level is the best safeguard.

Focus on **evolution first**, agile or efficiency comes second.
